### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The rejection of the claims relied principally on the teaching of DE '949 in view of Fitterer, FR '083 or VonKrusenstierna et al. Independent claim 1 now differs in specifying that the closure comprises polypropylene. In the affidavit from one of the inventors, applicant evidences that closures for sensors placed in molten metal or slag, like those of DE '949, would still be exposed to temperatures in excess of 200 °C. The higher temperature experienced by the closures of the prior art would appear to be supported by the teachings of Fitterer and VonKrusenstierna where the materials chosen for the closure happen to be materials able to withstand higher temperatures (i.e. refractory cement and silica respectively). See Fitterer, col. 13, lines 68-75 and VonKrusenstierna, col. 2, lines 20-22. Applicant also evidences that polypropylene has a melting temperature of 160 °C, which is lower than temperature that closures can be exposed to. Although the use of plastics in general and polypropylene in particular are known in the gas sensor art, the examiner is in agreement with the applicant that the particular use of polypropylene for the claimed closure would not have been obvious to one possessing ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
